Figure 17B

Figure 18

The figure is a Bode plot with 'Gain' on the vertical axis and 'Frequency' on the horizontal axis. The plot shows a piecewise linear approximation of a system's frequency response. It starts with a horizontal line at a constant gain level. This line then rises linearly to a peak, which is labeled with the value '191'. After the peak, the gain decreases linearly with increasing frequency.

Figure 19A

A line graph showing Phase (Y-axis) versus Frequency (X-axis). The Y-axis has labels for 0° and 90°. The X-axis has a label for 192. The curve starts at 0°, remains flat until a certain frequency, then rises steeply to 90°, and finally remains flat at 90° until the frequency 192, where it begins to rise again.
